ANT ON RAIL  ANT ON RAIL  ANT ON RAIL  ANT Description of the control of the cont	-3C503938R2735
There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.	it gets
	Your tack
Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left . It is to find and return the integer value representing how many times the ant reaches back to original starting position.	39 38 RAP
Note:	300
<ul> <li>Assume 1-based indexing</li> <li>Assume that the railing extends infinitely on the either sides</li> </ul>	cs <sup>o</sup>
Input Format:	3R <sup>2</sup> 3 <sup>2</sup> 56
input1 : An integer value N representing the number of moves made by the ant.	
input1 : An integer value N representing the number of moves made by the ant. input2 : An integer array A consisting of the ant's moves towards either side	્રું દુક્ <sup>તુક્તુ</sup> ક
